

A github.com -> + New repository

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere?
[Import a repository.](#)

Owner: testgit-healthy / **Repository name *** myproject ✓

Great repository names are short and memorable. Need inspiration? How about [didactic-fortnight?](#)

Description (optional)

☒ **Public**
Anyone can see this repository. You choose who can commit.

☐ **Private**
You choose who can see and commit to this repository.

Skip this step if you're importing an existing repository.

☐ **Initialize this repository with a README**
This will let you immediately clone the repository to your computer.

Add .gitignore: **None** | Add a license: **None** ⓘ

Create repository

Good to match name with RStudio project title

Copy "push existing repository code"

B

testgit-healthy / myproject

Unwatch 1 Star 0 Fork 0

Quick setup — if you've done this kind of thing before

Set up in Desktop or HTTPS SSH <https://github.com/testgit-healthy/myproject.git>

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# myproject" >> README.md
git init
git add README.md
git commit -m "first commit"
git remote add origin https://github.com/testgit-healthy/myproject.git
git push -u origin master
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/testgit-healthy/myproject.git
git push -u origin master
```
